

# NOTIFY

## Time & Attendance

Monitor occupancy with head count, in and out logs, and real-time location data based on the last beacon scan.

## COVID-19 Notification

System administrators can generate reports that list individuals who have had contact with an infected person beyond a settable threshold time for a specified range of days. Individuals on the list can be contacted and advised to follow the prescribed protocol for quarantine and isolation.

## Emergency Mustering

Security and safety with actionable data in the event of emergency situations. Assist emergency workers to respond properly to the event. Provides real-time people location and includes mobile roll call functions for quick information retrieval.

## ABOUT NOTIFY

NOTIFY is an indoor track and trace application that is touchless and automatic. The system uses BLE technology to continuously trace the location of people inside a facility.

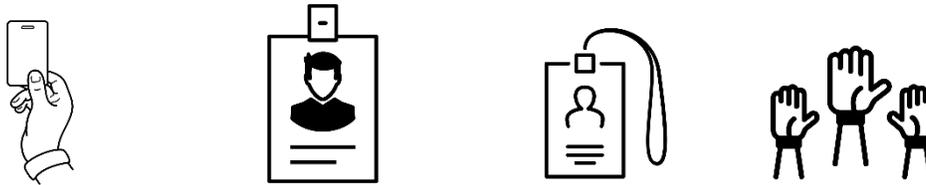

NOTIFY provides simple, accurate monitoring of workers, students, visitors, and assets with one easy to install and use system. The configurable dashboard offers real-time data collection with a full array of alerts and notifications along with readily accessible, fully customizable reports.

# HOW NOTIFY WORKS

There are three main components to the NOTIFY system:

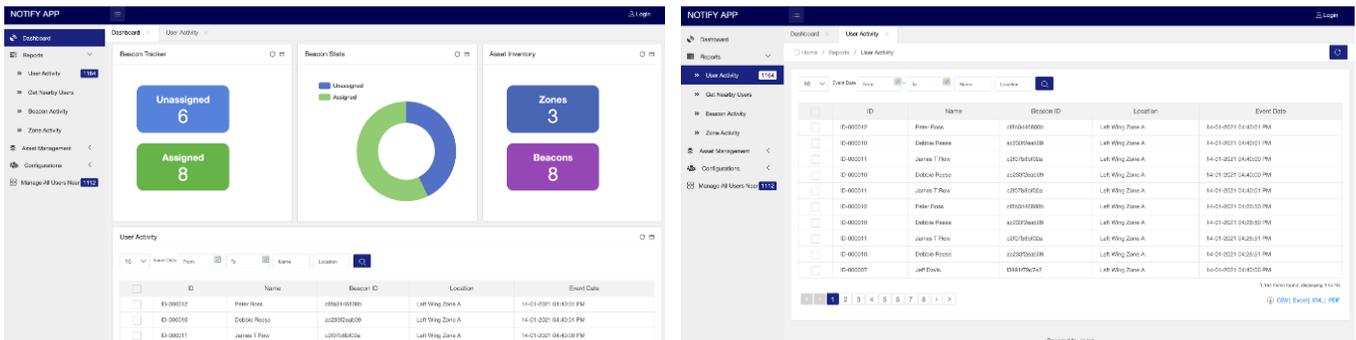

1) Badges or wristbands that are carried or worn. Users have a Unique ID that is transmitted to protect privacy.

2) Notify Locators are strategically placed inside the facility to document interactions. Time and location data is collected from user badges or wristbands. The data is sent to the NOTIFY dashboard in real-time.

3) A real-time dashboard for alerts and notifications. The app allows users to design zones, manage beacons, and configure real-time reports of personal interactions including location and duration of contact.

# “The all-in-one people alert, monitoring, and reporting application”

NOTIFY uses Joget. Faster, Simpler Digital Transformation.

## LOCATE. NOTIFY. PROTECT.

NOTIFY reporting works in most facility settings including corporate offices, schools, food and pharmaceutical processing, healthcare facilities, data centers, government and military, warehousing, events, construction, and manufacturing plants.

Features:

- ✓ Fast deployment can be installed in one day.
- ✓ No cell phone, user survey apps, GPS, or temperature monitoring requirements.
- ✓ Lightweight badges and lanyards included with optional wristbands or key fobs.
- ✓ Can be used in secured Cloud service or server-based inside network.
- ✓ Can use existing WIFI network.
