# NOTIFY® WORKSPACE
Fast and simple data collection for workplace strategies.

Simply plug it in, and instantly know - **who, when, and where**.

NOTIFY is an indoor track and trace application that is touchless and automatic. The system uses Bluetooth beacon technology to continuously trace the location of people inside a facility. It provides real-time, accurate monitoring with a simple to install and use system. **NOTIFY** is mobile friendly and easily configured.

It's as easy as one, two, three.

1. Set-up zones using **NOTIFY** plug-in gateways, or power gateways from existing WAP devices.

2. Issue beacons. A selection of wearable, lightweight beacons in wristbands, fobs attached to lanyards, or badges.

3. Get real-time actionable data to integrate into any workplace strategy. Includes headcount, locations used, dwell-time, and interaction reports from the **NOTIFY** dashboard.
