KeyPR
Key Tracking System for Secure Environments

rfidCollect's KeyPR is an asset tracking solution that uses RFID technology to set-up zones where key ring assets are continuously monitored, and real-time alerts are provided when assets move out of designated zones.

KeyPR provides simple, accurate monitoring of assets with one easy to install and use system. The configurable dashboard offers real-time data collection with a full array of alerts and notifications along with readily accessible, fully customizable reports.

Secure Alert System	Real-time Notifications	Configurable System
Geofence your key assets using RFID tags to prohibit critical key rings from leaving specified areas.	Alert security staff in real-time using audio alarms when keys leave a particular zone to prevent loss.	Set the KeyPR program for alarm duration and time limits between audio alarms. Adaptable dashboard connects to optional relational database to identify users and set-up multiple tracking events.

rfidCollect's **Tritan® Key Tag** is placed on each key ring. The KeyPR System geofences egress areas to eliminate the time and money spent on retooling locks due to lost keys. The asset management system is a continuously running automated tracking system that identifies keyrings within its purview, using the RFID tags attached to keyrings as a trigger mechanism.

Real-time alerts when assets move out of designated zones. All-in-one system.

There are three main components to the KeyPR system:

1. rfidCollect's **Tritan® Key Tag** is a robust, tamper-resistant UHF RFID tag used for security in harsh environments. The clear, injection molded enclosure is made from Tritan amorphous copolyester for toughness, hydrolytic stability, and resistance to heat and chemicals. Sealed inside the TRITAN tag is the Avery Dennison Smartrac Mini-Web UHF Unicode 9 inlay with optional barcode and human readable tag ID.

2. KeyPR scanners and antennas are strategically placed at egress locations or outside the facility to create zones. Time and location data is collected from the Tritan® Key tags and sent to the KeyPR dashboard in real-time.

3. A configurable dashboard for alerts and notifications. The app allows users to design zones, manage tag IDs, operate alarms, and create real-time reports of asset movement.

rfidCollect LLC, 7230 Lee Deforest Drive, #104, Columbia, MD 21046 www.rfidcollect.com 866-248-5040

Real-time alerts when assets move out of designated zones. All-in-one system.

Track and Protect

KeyPR reporting works in facility settings including corporate offices, schools, food and pharmaceutical processing, prisons and correctional facilities, healthcare facilities, data centers, government and military facilities, warehousing, events, construction, and manufacturing plants.

Features:
- ✓ Fast deployment can be installed in one day.
- ✓ Lightweight key fobs with Unique Tag ID.
- ✓ Can be used in secured Cloud service or server-based inside network.

Scanners and antennas are mounted above or below ceiling tiles, inside free-standing or wall-mounted portals, enclosed in NEMA boxes, or mounted directly to walls.
